New! Optimized funnel-shaped suction nozzle

Optimized funnel-shaped suction nozzle
T0053657399

Weller can supply a wide range of Zero Smog Extractor Systems for customised workplace configurations.

Our commitment to continuous improvement ensures the high quality of Weller products. For instance, we have recently revised the funnel-shaped suction nozzles for our Zero Smog Extraction Kits.

This gives you the following advantages:

Weight reduction

The weight of the suction nozzle has been reduced. This not only provides stable positioning of the extractor arm, but also prevents the extractor arm from dropping.

Less effort

We have improved the locking system on our suction nozzle, which now locks into the extractor arm with even less effort.

Improved flow

The rounded edges on the suction nozzle optimise flow for maximum extraction of contaminated air.

The new suction nozzle now replaces the previous version. We will supply you with one when you order the appropriate extraction kit (e.g. WFE 2S Kit or WFE 2ES Kit). The new suction nozzle has exactly the same dimensions as the previous model.

Part number **T0053657399** remains unchanged.
