

Just because you have the time doesn't mean you want to spend it.

The new Weller® WPS18MP High Performance Soldering Iron heats up and recovers three times faster than a standard home/hobbyist soldering iron. The 18-watt iron heats from room temperature to 480 °C in just 35 seconds and delivers performance equivalent to a typical 60-watt iron. A red LED power-on indicator turns green when the iron is up to temperature (look quick – it won't stay red very long). Another bright white LED shines right on the work. Professional performance in a consumer tool by Weller®.

- Breakthrough heat-up performance – heats up to working temperature in just 35 seconds
- Patented design provides temperature recovery that exceeds that of a 60 watt iron
- Red power-on LED changes to green when iron reaches working temperature
- Tip is elevated when tool is placed flat on work surface – no stand is needed
- Tips use a modular plug for easy tip exchange
- Ideal for electronics hobbyists
- Develops 480 °C (900 °F)
- Iron includes conical tip 0,8 mm

“ The new Weller® WPS18MP iron delivers unprecedented performance in a consumer tool.

Nothing else is closer.”

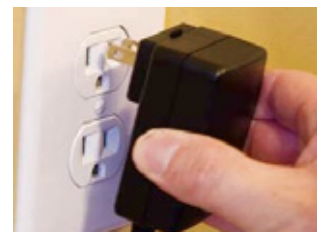

Bright LED illuminates the work, so it's easier to make perfect solder joints

Red power-on LED turns green when iron reaches working temperature

Easy and quick tip change-out with modular plug and rubberized sleeve

Patented power supply design helps give this iron outstanding performance
